

# Statistical Mechanics of Lattice Systems: 1

## Closed-Form and Exact Solutions

D. A. Lavis and G. M. Bell  
Department of Mathematics  
King's College, London

Springer-Verlag Berlin Heidelberg New York

ISBN 3-540-64437-7

Publication date: 8th March 1999

<b>1. Introduction to Thermodynamics and Phase Transitions . .</b>	<b>1</b>
1.1 Thermodynamic Variables: Simple Fluids . . . . .	1
1.2 Change of Variable and Thermodynamic Potentials . . . . .	3
1.3 Response Functions and Thermodynamic Relations . . . . .	4
1.4 Magnetic Systems . . . . .	6
1.5 Stationary Properties of Thermodynamic Functions . . . . .	7
1.6 Phase Equilibrium in the Van der Waals Gas . . . . .	9
1.7 The Field-Extensive Variable Representation of Thermodynamics . . . . .	12
1.8 The Field-Density Representation of Thermodynamics . . . . .	16
1.9 General Theory of Phase Equilibrium . . . . .	18
1.9.1 A One-Component Fluid . . . . .	19
1.9.2 Azeotropy . . . . .	22
1.10 Classical Theory and Metastability . . . . .	23
1.10.1 Metastability in a One-Component Fluid . . . . .	25
1.10.2 The Experimental Situation . . . . .	27
Examples . . . . .	28
 <b>2. Statistical Mechanics and the One-Dimensional Ising Model . . . . .</b>	 <b>31</b>
2.1 The Canonical Distribution . . . . .	31
2.1.1 The Thermodynamic Limit . . . . .	33
2.1.2 Kinetic and Configuration Variables . . . . .	33
2.2 Distributions in General . . . . .	35
2.3 Particular Distributions . . . . .	39
2.3.1 The Constant Magnetic Field Distribution . . . . .	39
2.3.2 The Constant-Pressure (Isobaric) Distribution . . . . .	39

2.3.3	The Grand Distribution . . . . .	40
2.3.4	Restricted Distributions for Lattice Models . . . . .	40
2.4	Magnetism and the Ising Model . . . . .	42
2.4.1	The One-Dimensional Ferromagnet in Zero Field . . . . .	44
2.4.2	The One-Dimensional Ferromagnet in a Field . . . . .	47
2.5	Fluctuations and Entropy . . . . .	49
2.6	The Maximum-Term Method . . . . .	53
2.6.1	The One-Dimensional Ising Ferromagnet . . . . .	54
2.6.2	The General Distribution . . . . .	56
2.7	A One-Dimensional Model for DNA Denaturation . . . . .	57
	Examples . . . . .	63
<b>3.</b>	<b>The Mean-Field Approximation,</b>	
	<b>Scaling and Critical Exponents . . . . .</b>	<b>67</b>
3.1	The Ising Model Ferromagnet . . . . .	67
3.1.1	Free Energy and Magnetization . . . . .	68
3.1.2	Fluctuations in Zero Field . . . . .	71
3.2	Interpretations of the Mean-Field Method . . . . .	76
3.2.1	Many-Neighbour Interactions and the Lebowitz–Penrose Theorem . . . . .	76
3.2.2	A Distance-Independent Interaction . . . . .	77
3.3	The Mean-Field Method for a More General Model . . . . .	78
3.4	Critical Points and Critical Exponents . . . . .	79
3.5	Scaling and Exponent Relations . . . . .	84
3.6	Classical Critical Exponents . . . . .	86
3.6.1	The Ising Model Ferromagnet: Mean-Field Approximation . . . . .	87
3.6.2	The Van der Waals Gas . . . . .	88
	Examples . . . . .	90
<b>4.</b>	<b>Antiferromagnets and Other Magnetic Systems . . . . .</b>	<b>93</b>
4.1	The One-Dimensional Antiferromagnet . . . . .	93
4.2	Antiferromagnetic Ising Models . . . . .	94
4.3	Mean-Field Theory . . . . .	99
4.3.1	The Paramagnetic State . . . . .	100
4.3.2	The Antiferromagnetic State . . . . .	101
4.3.3	The Simple Antiferromagnet . . . . .	103
4.4	Metamagnetism: Tricritical Points and Critical End-Points . . . . .	105
4.5	Ferrimagnetism: Compensation Points . . . . .	110
4.5.1	Zero Field . . . . .	113
4.5.2	Non-Zero Field . . . . .	114
	Examples . . . . .	117

<b>5. Lattice Gases</b>	119
5.1 Introduction	119
5.2 The One-Dimensional Lattice Gas and the Continuous Limit	121
5.2.1 The Lattice Gas	121
5.2.2 The Continuum Limit	124
5.3 The Simple Lattice Gas and the Ising Model	125
5.4 Phase Separation in the Simple Lattice Gas	127
5.5 A One-Dimensional Water-Like Model	128
Examples	132
<b>6. Solid Mixtures and the Dilute Ising Model</b>	135
6.1 The Restricted Grand Partition Function	135
6.2 Binary Mixtures	136
6.2.1 The Equivalence to the Ising Model	137
6.2.2 The Equivalence to a Lattice Gas	138
6.3 Order-Disorder on Loose-Packed Lattices	138
6.4 The Order Parameter and Landau Expansion	141
6.5 First-Order Sublattice Transitions	144
6.6 The Equilibrium Dilute Ising Model and Equivalent Models	147
6.6.1 Model I: The Equilibrium Dilute Ising Model	147
6.6.2 Model II: The Ising Model Lattice Gas	149
6.6.3 Model III: The Symmetrical Ternary Solid Mixture	149
6.6.4 Model IV: The Symmetrical Lattice Gas Mixture	150
6.6.5 Other Models	151
6.6.6 Applications	151
6.7 Mean-Field Theory and the Dilute Ising Model	151
6.8 Multicritical Points in the Dilute Ising Model	154
6.9 Multicritical Phenomena	
with Additional Thermodynamic Dimension	158
6.10 The Unsymmetrical and Completely Symmetrical Models	163
6.11 Alternative Forms for the Dilute Ising Model	166
6.11.1 Model A: Equilibrium Bond Dilution	166
6.11.2 Model B: Random Site Dilution	166
6.11.3 Model C: Random Bond Dilution	167
6.11.4 Model D: Equilibrium Site Dilution $\epsilon < 0$	168
Examples	169
<b>7. Cluster Variation Methods</b>	173
7.1 Introduction	173
7.2 A First-Order Method Using a General Site Group	174
7.2.1 Equivalent Sites	174
7.2.2 Sublattice Ordering	177
7.3 The Pair Approximation and the Ising Model	178
7.3.1 Zero Field	179
7.3.2 The Critical Region	180

7.3.3	The Linear Lattice	181
7.4	Phase Transitions in Amphipathic Monolayers	181
7.5	A Lattice Gas Model for Fluid Water	187
7.6	1:1 Ordering on the Face-Centred Cubic Lattice	193
7.7	Homogeneous Cacti	197
	Examples	200
<b>8.</b>	<b>Exact Results for Two-Dimensional Ising Models</b>	<b>205</b>
8.1	Introduction	205
8.2	The Low-Temperature Form and the Dual Lattice	206
8.3	The High-Temperature Form and the Dual Transformation	208
8.4	The Star-Triangle Transformation	211
8.5	The Star-Triangle Transformation with Unequal Interactions	214
8.6	A Linear Relation for Correlations	216
8.7	Baxter and Enting's Transformation and the Functional Equation	218
8.8	The Solution of the Functional Equation	220
8.8.1	A Preliminary Result for $f(\kappa k)$	221
8.8.2	Expressions for $A(\infty k)$ and $B(\infty k)$	223
8.8.3	An Expression for $b(k)$	224
8.9	Critical Behaviour	226
8.10	Thermodynamic Functions for the Square Lattice	229
8.11	Thermodynamic Functions for the Triangular and Honeycomb Lattices	232
8.12	The Antiferromagnet	235
	Examples	238
<b>9.</b>	<b>Applications of Transform Methods</b>	<b>241</b>
9.1	The Decoration Transformation	241
9.2	Dilute Decorated Models	244
9.2.1	A Superexchange Model	244
9.2.2	The Equilibrium Bond Dilute Ising Model	245
9.3	Heat Capacity and Exponent Renormalization	246
9.3.1	Three-Dimensional Lattices	247
9.3.2	Two-Dimensional Lattices	250
9.4	Fisher's Decorated Antiferromagnetic Model	251
9.5	The Decorated Lattice Ferrimagnet	256
9.6	The Kagomé Lattice Ising Model	262
9.7	A Modified Star-Triangle Transformation and Three-Spin Correlations	264
9.8	The Star-Triangle Ferrimagnet	266
9.9	The Unsymmetrical Ising Model	268
9.10	A Competing Interaction Magnetic Model	271
9.11	Decorated Lattice Mixtures of Orientable Molecules	273
9.12	The Decorated Lattice Gas	278

9.12.1	General Properties	278
9.12.2	A Water-Like Model	281
9.12.3	Maxithermal, Critical Double and Cuspoidal Points	283
9.13	Decorated Lattice Gas Mixtures	289
	Examples	290
<b>10.</b>	<b>The Six-Vertex Model</b>	<b>293</b>
10.1	Two-Dimensional Ice-Rule Models	293
10.2	Parameter Space	295
10.3	Graphical Representation and Ground States	297
10.4	Free Energy and Transfer Matrices	299
10.5	Transfer Matrix Eigenvalues	301
10.5.1	The Case $n = 0$	302
10.5.2	The Case $n = 1$	302
10.5.3	The General $n$ Case	304
10.6	The Low-Temperature Frozen Ferroelectric State	306
10.7	Wave-Number Density	307
10.8	The Solution of the Integral Equation for $-1 < \Delta < 1$	309
10.9	The Free Energy of the Disordered State	311
10.9.1	The KDP Model	312
10.9.2	Square Ice	312
10.9.3	Non-Zero Polarization	313
10.10	The Ferroelectric Transition in Zero Field	313
10.11	The Antiferroelectric State	316
10.12	Field-Induced Transitions	
	to the Completely Polarized State	319
10.13	An Antiferroelectric in an Electric Field	322
10.14	The Potts Model	325
10.14.1	The Staggered Six-Vertex Model	326
10.14.2	The Solvable Case $\xi_h \xi_v = 1$	329
10.14.3	The Solvable Case $\xi_h \xi_v = -1$	330
10.14.4	The Polarization and Internal Energy	331
10.14.5	Critical Exponents	331
	Examples	332
<b>A.</b>	<b>Appendices</b>	<b>335</b>
A.1	Regular Lattices	335
A.2	Elliptic Integrals and Functions	337
A.2.1	Elliptic Integrals	338
A.2.2	Elliptic Functions	339
A.2.3	Results Required for Chapter 8	340
A.3	The Water Molecule and Hydrogen Bonding	342
A.4	Results for the Six-Vertex Model	344
A.4.1	The Proof of I	345
A.4.2	The Proof of II	345

A.4.3	The Proof of III .....	345
A.4.4	The Proof of IV .....	348
A.5	Fourier Transforms and Series .....	349
A.5.1	Fourier Transforms .....	349
A.5.2	Fourier Series .....	349
